

HSBC Managed Growth Fund

Monthly report 31 December 2022 | Share class P

Investment objective

The objective of the Fund is to achieve long-term capital growth by investing in a diversified portfolio with a bias towards global equities through direct investment and/or other collective investment schemes that the Fund may invest in.

Main risks

- The Fund invests mainly in global equities and bonds, with a bias towards equities. The Fund may get the exposure through direct investments and/or collective investment schemes.
- Fund may have asset allocation strategy risk. The investments of the Fund may be periodically rebalanced and therefore the Fund may incur greater transaction costs.
- The Fund may invest in financial derivative instruments for investment purpose which may lead to higher volatility to its net asset value.
- The Fund's investments may involve substantial credit, currency, volatility, liquidity, interest rate, tax and political risks and risks related to general equity market, emerging markets and investment in other collective investment schemes. Investors may suffer substantial loss of their investments in the Fund.
- Investors should not invest solely based on factsheet and should read the offering documents for details.

Hong Kong Equities	--	1.00	0.00	1.00
Liquidity	6.45	3.00	3.00	0.00

The strategic allocation is the portfolio's reference or neutral allocation set by HSBC Asset Management. The management team also adjusts target exposure higher (overweight) or lower (underweight) to an asset type - relative to the strategic asset allocation - depending on the team's current market outlook. Positive values (overweights) in the chart reflect asset types the portfolio management team have a positive outlook on. Negative values (underweights) reflect asset types the portfolio management team have a negative outlook on. The actual exposure is a screen shot of the portfolio at the end of the month based on market value in each asset type.

Top 10 Holdings	Weight (%)
Tencent Holdings Ltd	3.16
ALIBABA GROUP HOLDING LTD	2.54

Monthly performance commentary

Portfolio Review

All major equity markets posted negative returns in December as investors began to price in the risks of impending recession. The strongest declines were seen in developed markets while emerging markets were relatively resilient. Emerging markets were supported by Chinese equities which rallied in December on the back of lifting of restrictions related to COVID-19. On fixed income front, government bonds also posted negative returns during the final month of the year. As expected, the ECB delivered a 50bp hike. However, a surprisingly hawkish statement, and forecasts triggered a sell-off across Eurozone markets. In the US, a lower-than-expected November CPI print didn't significantly move the market. As anticipated, the Fed hiked rates by 50bp during the month, although forecasts for the peak rate increased marginally. This drove US Treasury yields higher, particularly at the longer end of the curve. The Bank of Japan surprised markets as it moved to relax its Yield Curve Control policy, resulting in notable falls in Japanese bond markets. We saw some dollar weakness during December, triggered primarily by the lower than expected US CPI print. Oil prices fell during December, as markets continued to discount the commodity on expectations of slowing growth in 2023. This was despite OPEC+ reaffirming its commitment to its current oil production cuts of 2m barrels per day until the end of 2023.

Supplemental information sheet

Share class	Share Class Base Currency	Distribution Frequency	Dividend ex-date	Dividend Amount	Annualised Yield based on ex-dividend date
A	HKD	Annually	29 July 2022	0.077500	0.33%
P	HKD	--	--	--	--

The above table cites the last dividend paid within the last 12 months only.

Dividend is not guaranteed and may be paid out of capital, which will result in capital erosion and reduction in net asset value. A positive distribution yield does not imply a positive return. Past distribution yields and payments do not represent future distribution yields and payments. Historical payments may be comprised of both distributed income and capital.

The calculation method of annualised yield from August 2019 is the compound yield calculation: $((1 + (\text{dividend amount} / \text{ex-dividend NAV}))^n)^{1/n} - 1$, n depends on the distributing frequency. Annually distribution is 1; semi-annually distribution is 2; quarterly distribution is 4; monthly distribution is 12.

The annualised dividend yield is calculated based on the dividend distribution on the relevant date with dividend reinvested, and may be higher or lower than the actual annual dividend yield.
