The strategic allocation is the portfolio's reference or neutral allocation set by HSBC Asset Management. The management team also adjusts target exposure higher (overweight) or lower (underweight) to an asset type - relative to the strategic asset allocation - depending on the team's current market outlook. Positive values (overweights) in the chart reflect asset types the portfolio management team have a positive outlook on. Negative values (underweights) reflect asset types the portfolio management team have a negative outlook on. The actual exposure is a screen shot of the portfolio at the end of the month based on market value in each asset type.

## Monthly performance commentary

### Portfolio Review

Global equities rallied in January, led by mainland China and Eurozone, with US also rebounding strongly from December. China reopening continued to support investor sentiment in emerging markets while Europe was supported by softening inflation. Government bonds also posted strong return. US CPI came in line with market consensus, while long-term treasury yields fell over the month supported by slowing wage growth. In Europe, yields rose after the ECB reiterated its hawkish view, accompanied by a higher than expected Spanish inflation print. BoJ surprised the market by leaving policy rates unchanged, bringing 10Y JGB yields below the YCC band. The bank of Canada hiked 25bps, yet delivered a more notable signal of hike pause, driving 10Y yield down. Dollar weakened on the back of inflation slowdown. Oil was down over the month as uncertainty rose in the face of the upcoming OPEC+ meeting and the EU ban on Russia's oil products.

Supplemental information sheet

Share class	Share Class Base Currency	Distribution Frequency	Dividend ex-date	Dividend Amount	Annualised Yield based on ex-dividend date
A	HKD	Annually	29 July 2022	0.077500	0.33%
P	HKD	--	--	--	--

The above table cites the last dividend paid within the last 12 months only.  
Dividend is not guaranteed and may be paid out of capital, which will result in capital erosion and reduction in net asset value. A positive distribution yield does not imply a positive return. Past distribution yields and payments do not represent future distribution yields and payments. Historical payments may be comprised of both distributed income and capital.  
The calculation method of annualised yield from August 2019 is the compound yield calculation:  $((1 + (\text{dividend amount} / \text{ex-dividend NAV}))^n)^{1/n} - 1$ , n depends on the distributing frequency. Annually distribution is 1; semi-annually distribution is 2; quarterly distribution is 4; monthly distribution is 12.  
The annualised dividend yield is calculated based on the dividend distribution on the relevant date with dividend reinvested, and may be higher or lower than the actual annual dividend yield.
