Manager's Comments

US equities rallied overall. News that California-based start-up lender SVB Financial had collapsed rocked the market, coming just days after the failure of cryptocurrency-focused Signature Bank. The news sparked a flight out of smaller lenders, causing a group of well capitalised larger banks, such as JPMorgan Chase and Bank of America, to deposit USD 30 billion to prop up troubled lender First Republic Bank. US bonds closed a volatile month with positive returns. An initial sell-off at the start of March saw the 10-year Treasury bond trade back above 4.0% whilst the yield on the two-year note rose above 5.0 % for the first time since 2007. The resultant yield curve inversion of more than 100 basis points (bps) was the most extreme since 1981.

Investing in fixed income instruments (if applicable) may expose investors to various risks, including but not limited to creditworthiness, interest rate, liquidity and restricted flexibility risks. Changes to the economic environment and market conditions may affect these risks, resulting in an adverse effect to the value of the investment. During periods of rising nominal interest rates, the values of fixed income instruments (including short positions with respect to fixed income instruments) are generally expected to decline. Conversely, during periods of declining interest rates, the values are generally expected to rise. Liquidity risk may possibly delay or prevent account withdrawals or redemption.

Investment involves risks, in particular, risks associated with investment in emerging and less developed markets. Past performance is not indicative of future performance.

基金經理評論

美國股市整體上升。專注於加密貨幣業務的簽名銀行 (Signature Bank)，以及在加州專為初創公司貸款的矽谷銀行 (SVB Financial) 在數天內相繼倒閉，消息震驚市場。該消息觸發較小型銀行出現擠提，使摩根大通及美國銀行等資本充足的大型銀行存入300億美元，以支持陷入困境的第一共和銀行 (First Republic Bank)。美國債券在月內反覆波動，但仍然錄得正回報。在3月初的拋售潮中，10年期美國國庫券收益率回升至4.0%以上，而兩年期國庫券收益率自2007年以來首次升至5.0%以上。結果，收益率曲線倒掛超過100點子，是自1981年以來最嚴重。
