

Allianz Choice Balanced Fund

Risk Disclosure

- The Fund aims to achieve a high level (above market) of overall return over the long term by investing in a diversified portfolio of global equities and fixed-interest securities.
- The Fund is exposed to investment risk, equity risk, risk of investing in fixed-interest securities, company-specific risk, and concentration risk, risks relating to the nature of a fund of funds, currency risk and asset allocation risk.
- The Fund may invest in financial futures or options contracts which may expose to higher counterparty, liquidity, and market risks. Use of such derivatives may become ineffective and result in significant losses to the Fund. The Fund's net derivative exposure may be up to 50% of the Fund's net asset value.
- Investment involves risks that could result in loss of part or entire amount of investors' investment.
- In making investment decisions, investors should not rely solely on this material.

Investment Objective

The Fund aims to achieve a high level (above market) of overall return over the long term by investing in a diversified portfolio of global equities and fixed-interest securities.

Manager's Comments

US equities continued their weak trend for much of May. The S&P 500 Index briefly entered an official bear market, having fallen 20% from its peak in early-January, before a late-month rally which helped the index close the month with flat returns. The Fed raised the federal funds rate by 50 basis points (bps), its first increase of that magnitude since 2000, and signalled that it would raise rates by the same amount in both June and July. There appears to be a growing swell of opinion that the US Federal Reserve may have to engineer a short period of negative growth to take the heat out of the US economy. US bonds overcame a sharp sell-off to close the month with positive returns. Having reached a peak in early-May, the yield on the 10-year US Treasury bond subsequently declined sharply, as fears over the outlook for the global economy outweighed concerns over rampant inflation.

Information herein is based on sources we believe to be accurate and reliable as at the date it was made. We reserve the right to revise any information herein at any time without notice. No offer or solicitation to buy or sell securities and no investment advice or recommendation is made herein. In making investment decisions, investors should not rely solely on this material but should seek independent professional advice.

Investing in fixed income instruments (if applicable) may expose investors to various risks, including but not limited to creditworthiness, interest rate, liquidity and restricted flexibility risks. Changes to the economic environment and market conditions may affect these risks, resulting in an adverse effect to the value of the investment. During periods of rising nominal interest rates, the values of fixed income instruments (including short positions with respect to fixed income instruments) are generally expected to decline. Conversely, during periods of declining interest rates, the values are generally expected to rise. Liquidity risk may possibly delay or prevent account withdrawals or redemption.

Investment involves risks, in particular, risks associated with investment in emerging and less developed markets. Past performance is not indicative of future performance.

Investors should read the prospectus for further details, including the risk factors, before investing. This material and website have not been reviewed by the Securities and Futures Commission of Hong Kong. Issued by Allianz Global Investors Asia Pacific Limited.

Allianz Global Investors Asia Pacific Limited (32/F, Two Pacific Place, 88 Queensway, Admiralty, Hong Kong) is the Hong Kong Representative and is regulated by the Securities and Futures Commission of Hong Kong. (54/F, One Island East 18 Westlands Road, Quarry Bay, Hong Kong).

基金經理評論

美國股市在5月大部份時間延續疲弱走勢。標準普爾500指數從1月初的高位下跌20%，一度正式進入熊市，隨後於月底反彈，令指數在月底收市持平回報。聯儲局將聯邦基金利率上調50點子，自2000年以來首次如此大幅度加息，並暗示將會在6月和7月以相同幅度加息。市場似乎日益認為，美國聯儲局可能必須策劃短期負增長，才能為美國經濟降溫。美國債券在月內克服急劇拋售，實現正回報，10年期美國國庫券收益率在5月初見頂後急劇回落，原因是市場對全球經濟前景的憂慮大於通脹加劇。
