Investing in fixed income instruments (if applicable) may expose investors to various risks, including but not limited to creditworthiness, interest rate, liquidity and restricted flexibility risks. Changes to the economic environment and market conditions may affect these risks, resulting in an adverse effect to the value of the investment. During periods of rising nominal interest rates, the values of fixed income instruments (including short positions with respect to fixed income instruments) are generally expected to decline. Conversely, during periods of declining interest rates, the values are generally expected to rise. Liquidity risk may possibly delay or prevent account withdrawals or redemption.

Investment involves risks, in particular, risks associated with investment in emerging and less developed markets. Past performance is not indicative of future performance. Investors should read the prospectus for further details, including the risk factors, before investing. Manager's Comments

US equities rebounded, the S&P 500 Index recording its first monthly increase since July, amid growing hopes that the Federal Reserve (Fed) would soon start to ease back the rate at which it is raising rates. The tech-heavy Nasdaq Index lagged the broader S&P 500 Index as growth stocks were hit by a wave of disappointing news from high-profile companies. In contrast, value shares rallied strongly. US bonds sold off modestly over October as investors priced in another substantial increase in interest rates from the Federal Reserve (Fed) in November. In mid-October, the yield on the 10-year Treasury reached a 14-year high of 4.33%, before closing the month around 4.0%, an increase of 20 basis points over the month.

基金經理評論

美國股市反彈，標準普爾500指數錄得自7月份以來的首次按月升幅，因為市場日益憧憬美國聯儲局即將開始放慢加息步伐。以科技股為主的納斯達克指數表現落後於更廣泛的標準普爾500指數，源於知名企業出現一連串令人失望的消息，令增長型股受到衝擊。相比之下，價值股急升。因投資者預期美國聯儲局將於11月份再度大幅加息，美國債券在10月份有少量拋售。10年期美國國庫券收益率在10月中旬升至4.33%的14年新高，隨後於月底收市處於4.0%左右，月內上升20點子。
