

A Accumulation HKD | Data as at 31.05.2020

Important Information

The fund invests primarily in fixed and floating rate securities denominated in HKD.

- The fund invests in debt securities which may be subject to interest rate, credit and counterparty risks.
- Investment in sovereign debt obligations which may expose the fund to political, social and economic risks. The fund may suffer significant losses upon defaults by government entities.
- The fund invests in the emerging markets and concentrated region and subject to ownership and custody risk, political and economic risks, market and settlement risks, etc..
- The fund may use derivatives to meet its investment objective. Derivatives exposure may involve higher counterparty, liquidity and valuation risks. In adverse situations, the fund may suffer significant losses from their derivative usage for hedging.
- For share classes with a general dividend policy, expenses will be paid out of capital rather than out of gross income. The amount of distributable income therefore increases and the amount so increased may be considered to be dividend paid out of capital. Share classes with a fixed dividend policy may pay out both income and capital in distributions. Where distributions are paid out of capital, this amounts to a return or withdrawal of part of your original investment or capital gains attributable to that and may result in an immediate decrease in the net asset value of shares.

You should not make any investment decision solely based on this document. Please read the relevant offering document carefully for further fund details including risk factors.

Investment Objectives
